Imperial College London

Programme Information

Programme Title		Programme Code	HECoS Code
Computational Methods in Ecology and Evolution		C1Y9	For Registry Use Only

Award	Length of Study	Mode of Study	Entry Point(s)	Total Credits	
				ECTS	CATS
MRes	1 Calendar Year (12 months)	Full Time	Annually in October	90	180

Ownership

Awarding Institution	Imperial College London	Faculty	Faculty of Natural Sciences
Teaching Institution	Imperial College London	Department	Life Sciences
Associateship	Diploma of Imperial College (DIC)	Main Location(s) of Study	Silwood Park Campus

External Reference

Relevant QAA Benchmark Statement(s) and/or other external reference points	N/A
FHEQ Level	7
EHEA Level	2nd Cycle

External Accreditor(s) (if applicable)

External Accreditor 1:	N/A		
Accreditation received:	N/A	Accreditation renewal:	N/A

Collaborative Provision

Specification Details

Programme Lead	Professor Samraat Pawar, Course Director
Student cohorts covered by specification	2023-24 entry
Date of introduction of programme	October 14
Date of programme specification/revision	August 2023

Programme Overview

Over the past 10–20 years, biology has become increasingly quantitative, and mathematical sciences have in turn been increasingly influenced by biology.

It has been said that "mathematics is biology's next microscope, only better" (Cohen, Plos Biology, 2004) because mathematical, statistical, and computational sciences will continue to reveal unsuspected and entirely new worlds within biology, just as the microscope revealed previously unseen worlds following its invention.

It has also been said that "biology is mathematics' next physics, only better" (Cohen, Plos Biology) because biology will in turn continue to spur major new developments in computation, mathematics and statistics, just as physics has done in past centuries.

In this unique course you will learn quantitative methods and biological concepts together, through application of the methods to cutting-edge biological research problems.

This course is suitable for:

- Life scientists wishing to expand their quantitative skills in light of the increasingly quantitative nature of modern biology
- Physical scientists (mathematicians, physicists, statisticians, computer scientists) with a strong interest in biology

The course serves as ideal preparation for PhD studies or employment in fields of applied quantitative biology, such as resource management and conservation in both academic and non-academic sectors.

Learning Outcomes

Please refer to the Teaching Toolkit for advice on the role and purpose of Intended Learning Outcomes (ILO):
www.imperial.ac.uk/staff/educational-development/teaching-toolkit/intended-learning-outcomes

Knowledge and Understanding

1. Know basic principles of several fields within ecology, evolution, and evolutionary ecology, from a quantitative viewpoint.
2. Identify analytical, statistical and modelling methods appropriate for specific lines of inquiry in these fields.
3. Understand the fundamental role of mathematical models in modern biology and what can and cannot be accomplished with modelling.
4. Critically evaluate different modelling frameworks, their strengths and weaknesses.
5. Have detailed knowledge and understanding of the essential facts, concepts, principles and theories relevant to the student's chosen area of specialisation.

Skills

1. Plan and conduct a programme of original research designed to address specific questions.
2. Integrate and quantify biological knowledge and questions into models and testable hypotheses.
3. Implement and analyse mathematical models with computer simulations.
4. Apply programming, data analytical, statistical and data modelling skills.
5. Use and/or develop computational tools and packages.
6. Use a suite of basic statistical tools for fitting mathematical models to data and comparing the performance of those models.
7. Use the scientific literature effectively.
8. Use advanced project management skills: decision making, problem definition, project design and evaluation, risk management, teamwork and coordination.

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at:
www.imperial.ac.uk/students/academic-support/graduate-attributes

Entry Requirements

Academic Requirement	Normally a 2.1 UK Bachelor's Degree with Honours in a Biological, Ecological, or other Life Sciences subject, or in a Physical Sciences

	subject (or a comparable qualification recognised by the College).
	In addition, for candidates with a biology background, a minimum of B at A-level maths AND/OR a degree AND/OR work/research experience that demonstrates at least basic knowledge of computing is required. Candidates with non-biological backgrounds (for example maths, physics, or geography) or qualifications below the minimum level of the College academic regulations i.e. a lower Second Class Honours degree will need to convince the course directors of their interest, eligibility and/or suitability through their statement of intent in their application, and if necessary, through an informal interview. For further information on entry requirements, please go to www.imperial.ac.uk/study/apply/postgraduate-taught/entry-requirements/accepted-qualifications/
Non-academic Requirements	N/A
English Language Requirement	Standard requirement (PG) Please check for other Accepted English Qualifications
Admissions Test/Interview	N/A

The programme's competency standards documents can be found at: www.imperial.ac.uk/media/imperial-college/faculty-of-natural-sciences/department-of-life-sciences/public/postgraduate/masters/Life-Sciences-Competence-standards-PG.pdf

Learning & Teaching Approach

Learning and Teaching Delivery Methods

Scheduled
• Lectures
• Primers
• Seminars
• Workshops

E-learning & Blended
• Computer-based work with cloud-based version control
• Online lecture and assessment materials
• Online seminar recordings

Projects and Placements
• One mini-project
• Individual research project and dissertation (5 months), which can include placements

You will experience a range of learning teaching methods. Because the course is focused on computing skills – which are better learned by practice – staff will mix short lectures followed by practical sessions consisting of short exercises and longer self-standing practicals. The longer practicals will present problems, which will require a mix of independent and group work. These will be supported by graduate teaching assistants and teaching staff. Taught topics in Term 1 will usually include students from the CMEE MSc and MRes only (not shared with other courses) – usually 20-30 students.

You will need to complete three coursework elements (in addition to a seminar diary; see Table in next section). Each element will consist of a section of taught material to introduce the task and then a period of independent work to complete the element. During these periods, there will be scheduled help sessions and continued access to support by peer-to-peer discussion, graduate teaching assistants and staff support.

Finally, your research project component is an extended piece of independent research where you are expected to take the lead in developing the research question and driving the work forward. You will be supported by an academic supervisor, who will be responsible for the day-to-day guidance on your project, as well as by a set of taught research skills topics introducing core skills used in projects. These core research skills are taught across a wider set of Masters programmes and will have larger class sizes (usually 100-130 students).

We also expect you to attend departmental seminars, which provide research level presentations across a wide range of topics within ecology and evolution.

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. At Imperial, each ECTS credit taken equates to an expected total study time of 25 hours. Therefore, the expected total study time for this 90 ECTS credit course is 2250 hours per year. Typically, you will spend around 20% of your time in lectures and practicals and about 30% of your time in independent study during the taught part of the course. The remaining 50% of your time will be spent on independent study on your research project.

Assessment Strategy

Assessment Methods

You will be assessed in a variety of ways designed to test different skills. These will include computing code, written projects, exams, research project, research presentation and project viva.

The programme allows you to test your understanding of the subject informally before you complete the formal summative assessments that count towards your final mark. These summative assessments allow you to demonstrate that you have met the intended learning outcomes for each module, and contribute towards your achievement of the programme learning outcomes. There is formal summative assessment linked to each module.

Balance of assessment
The percentages below are based on a typical pathway through the course.

	Year 1
Coursework	80 %
Exams	20 %

Coursework items include computing code, mini-project and research project reports and presentations. Exams include written multiple-choice exams, written essay exams and a research project viva.

Academic Feedback Policy

Coursework (including exam questions) is marked and comments by the marker will be annotated directly on the papers (typically, electronically). A summary of the feedback and an indicative mark will be given. The papers will then be returned to the students as soon as possible and within two weeks of submission. A meeting will be held after the end of the taught component, at which each student will have a one- to-one discussion with the Course Director on progress to date, coursework marks achieved and expectations for the upcoming project.

Final marks for major assessments will only be released after final exam board approval.

Staff-student meetings are held termly to communicate general feedback between student representatives and the course directors. Additional meetings are held to provide general feedback and guidance e.g. on exam performance and project selection.

Research projects are marked by 2 independent assessors, based on the thesis itself, a research presentation and a viva. Your supervisor will also provide an assessment of your research practice. Electronic feedback of these assessments are returned automatically to students after the final examiners meeting.

The College's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at:
www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy		
The College's Policy on Re-sits is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/		
Mitigating Circumstances Policy		
The College's Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/		

Additional Programme Costs		
This section should outline any additional costs relevant to this programme which are not included in students' tuition fees.		
Description	Mandatory/Optional	Approximate cost
Laptop computer capable of running a UNIX-based OS	Mandatory	Will be loaned by department if required.

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure[1]					
Year 1 – FHEQ Level 7 **You will study all core and compulsory modules.**					
Code	Module Title	Core/ Compulsory/ Elective	Group	Term	Credits
LIFE70012	Introduction to Biological Computing	Compulsory		Autumn	15
LIFE70013	CMEE Biological Computing Mini Project	Compulsory		Autumn	10
LIFE70014	High Performance Computing	Compulsory		Autumn	5
LIFE70015	CMEE MRes Research Project	Core		Spring- Summer	60
				Credit Total	90

[1] **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

Progression and Classification

Award of a Masters Degree (MRes)
To qualify for the award of a postgraduate degree you must have:
1. accumulated credit to the value of no fewer than 90 credits at level 7 or above of which no more than 15 credits may be from credit level 6;
2. and no more than 15 credits as a Compensated Pass;
3. met any specific requirements for an award as outlined in the approved programme specification for that award.

Classification of Postgraduate Taught Awards

The College sets the class of Degree that may be awarded as follows:
1. Distinction: 70.00% or above.
2. Merit: 60.00% or above but less than 70.00%.
3. Pass: 50.00% or above but less than 60.00%.

Your classification will be determined through the Programme Overall Weighted Average and the designated dissertation or final major project module meeting the threshold for the relevant classification band.

Your degree algorithm provides an appropriate and reliable summary of your performance against the programme learning outcomes. It reflects the design, delivery, and structure of your programme without unduly over-emphasising particular aspects.

Programme Specific Regulations

The College's Academic and Examination Regulations can be found at: www.imperial.ac.uk/about/governance/academic-governance/regulations
Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College's Centenary, 8th July 2007, established the College as a University with the name and style of "The Imperial College of Science, Technology and Medicine". www.imperial.ac.uk/admin-services/secretariat/college-governance/charters/
Imperial College London is regulated by the Office for Students (OfS) www.officeforstudents.org.uk/advice-and-guidance/the-register/
This document provides a definitive record of the main features of the programme and the learning outcomes that you may reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
