

Job Title:	Research Engineer
Department/Division/Faculty:	Imperial Global Singapore – IN-CYPHER
Campus location:	CREATE Tower, 1 CREATE Way Singapore
Job Family/Level:	Academic and Research \$5,000 to \$9,000 Monthly dependent of experience
Responsible to:	Professor Anil Anthony Bharath, IN-CYPHER Programme Co-Director
Key Working Relationships (internal):	IN-CYPHER researchers, Collaborators within Imperial College London, Collaborators within Nanyang Technological University
Key Working Relationships (external):	As identified within the Singapore Healthcare, Governmental, Cybersecurity and Startup Ecosystem
Contract type:	2 years fixed term (subject to 6-month probation)

Purpose of the Posts

[Imperial College London](#) and [Nanyang Technological University \(NTU\)](#) are seeking Research Engineers to join the exciting new [Imperial/NTU CYber Protection for HEalthcaRe \(IN-CYPHER\) research programme](#) on the cybersecurity of connected medical devices and systems. The research programme represents a collaboration between the United Kingdom and Singapore and will be based at the newly established [Imperial Global Singapore \(IGS\)](#).

We are particularly looking for **Machine Learning Research Engineers** with the following backgrounds:

- Generative Modelling (particularly LLMs and multi-Agent systems)
- Data science
- High-performance Computing
- Data-driven personalised healthcare
- Model-based personalised healthcare (e.g. pharmacokinetic modelling)
- Translational and regulatory expertise in medical devices

As a Machine Learning Research Engineer, the successful candidate will contribute to the programme by developing and implementing novel machine learning algorithms with focus on security and data privacy, as well as translating recent AI advancements to the healthcare setting.

IN-CYPHER is comprised of four interacting themes, spanning the design of intelligent medical devices through to the use of their data in informing personalised healthcare. Allied to other programmes in Singapore and the UK, it represents a unique opportunity to be at the forefront of research and development into securing the vital information that flows between implantable, wearable and connected medical devices, including those currently in use, and those yet to be developed. The four themes of IN-CYPHER are:

Theme 1 Protecting Implantable Devices

Implantable and wearable medical devices – including both sensors and active devices – operate under strong design constraints. Our research in this area seeks to embed secure design from first principles, and at the most fundamental levels (silicon or substrate) of device design; we also

recognise the need to consider the challenge of post-quantum cryptographically secure techniques in the immediate future.

Theme 2 Securing Connected Wearables & Healthcare Systems

Increasingly, medical devices incorporate some form of connectivity, and many of these devices are necessarily designed to be in use for between one and two decades. There is a constant risk of exploit of zero-day vulnerabilities, and therefore a requirement to detect breaches in extremely intricate complex networks and data flow pipelines. We seek solutions to this challenge that embed security at hardware level.

Theme 3 Algorithms for Privacy, Security and Provenance

To control active medical devices – such as closed-loop drug-delivery systems – information moves from sensors and devices along different communications channels; data provenance and integrity are important. Moreover, the use of data-driven algorithms potentially exposes protected patient characteristics, presenting specific technical challenges not only within operational use, but also to product development cycles.

Theme 4 Clinical Innovation & Translation

One area of personalised medicine resides in the use of data for closed-loop drug delivery, including insulin delivery. With key researchers and teams from both Lee Kong Chian School of Medicine and Imperial College Healthcare NHS Trust, we seek to develop threat models that are suitable for emerging approaches to personalised medicine, and particularly where data-driven techniques might offer improvements to patient outcomes.

Given the span of the IN-CYPHER programme, we are seeking motivated research engineers to join the IN-CYPHER programme. Unique in its scope, we are developing technologies that span embedded systems, and the protocols used to control and communicate sensitive patient information, all the way up to interventional devices and systems for personalised healthcare.

The collaborating Departments include senior academics from the [Department of Metabolism, Digestion and Reproduction](#) and the [Department of Bioengineering at Imperial](#) – the largest Biomedical Engineering Department in the UK – and senior researchers from the [School of Computer Science and Engineering \(SCSE\)](#), [School of Electrical and Electronic Engineering](#) and the [Lee Kong Chian School of Medicine](#) at Nanyang Technological University. Candidates will be employed by Imperial Global Singapore, a research division of Imperial College London, consistently ranked within the top 10 of the QS University Rankings. Candidates must be resident and based in Singapore, but there will be opportunities for research visits to Imperial's London-based locations.

Informal enquiries are greatly welcome. You are encouraged to send an e-mail to Dr Viktor Schlegel, Deputy Programme Director v.schlegel@imperial.ac.uk, together with an indication of the Theme(s) under which you will be most interested in working.

Questions about the recruitment process, should go to Paige Noyce, Associate Director p.noyce@imperial.ac.uk.

Key Responsibilities

Main Duties

- Proactively support research activities of research fellows by producing high-quality software artefacts
- Keep abreast with contemporary AI developments, both theoretically (by reading and understanding publications in relevant high-quality venues) and practically (by maintaining hands-on experience with relevant code bases, frameworks, and libraries)

- Identify and develop and apply suitable learning techniques, paradigms, algorithms and required libraries and frameworks
- Maintain highly organised and accurate record of work
- Maintain and promote the highest standards of scientific integrity
- Actively participate in all aspects of the research programme of IN-CYPHER
- Report research activities both internally and externally
- Present findings to colleagues and at national/international conferences
- Proactively support publications in high quality refereed journals and conferences
- Collaborate with scientific, clinical and translation partners, to translate research ideas into real-world application and/or positive societal impact
- Attend relevant workshops as necessary
- Develop contacts and research collaborations within IGS, Imperial, NTU and the wider community
- Promote the positive reputation of IGS, IN-CYPHER Programme
- Maintain high-quality documentation of your work in a way that it can be directly as part of other documents, such as reports, academic publications or grant applications
- Participate in group research meetings and internal seminars
- Contribute to the smooth running of IN-CYPHER and other programmes under IGS
- Assist in the supervision of undergraduate interns, postgraduate research students and research assistants as required
- Comply with IGS' and CREATE practices and to attend courses on safety when appropriate
- Any other duties as may be deemed reasonable by scientific and operations managers of IGS, IN-CYPHER and scientific investigators of the relevant Themes.

Other Duties

- Undertake any necessary training and/or development
- Undertake appropriate administration tasks
- Attend relevant meetings
- Observe and comply with all IGS policies and regulations, including the key policies and procedures on:
 - Confidentiality,
 - Conflict of Interest
 - Business Continuity
 - Data Protection
 - Equal Opportunities
 - Ethics related to scientific conduct and to considerations of patient data, where appropriate
 - External Interests
 - Financial Regulations
 - Health and Safety
 - Use of Information Technology
 - Policies regarding smoking and e-cigarettes
 - Undertake specific safety responsibilities relevant to individual roles, as set out by IGS

Positions are based in Singapore at Imperial Global Singapore at the [National Research Foundations Campus for Research Excellence and Technological Enterprise \(CREATE\)](#) located on the campus of the National University of Singapore

Job descriptions cannot be exhaustive and the post holder may be required to undertake other duties, which are broadly in line with the above key responsibilities.

Imperial Global Singapore is committed to equality and values diversity. IGS adheres to Imperial [Values and Behaviours framework](#).

Person Specification

Requirements	Essential (E)/ Desirable (D)
Candidates/post holders will be expected to demonstrate the following	
Education	
A good relevant undergraduate degree (e.g. Computer Science, Electrical Engineering, Artificial Intelligence or similar)	E
Relevant Master's Degree or equivalent Research or Industry experience	D
Experience	
Practical experience within a research environment and publication in relevant and refereed journals and conferences.	E
Experience by way of illustration, in at least one of the following topics: <ul style="list-style-type: none"> • Deep Learning • Large-scale computational experiments (e.g. training LLMs) • Large Language Models and multi-Agent systems • Generative AI • Machine Learning Engineering, including ML-OPS 	E
Experience of: <ul style="list-style-type: none"> • Engineering in a research environment; • Applying generative AI to (one or more of): engineering processes, IoT, cyber-security research & pen-testing, Healthcare; • strongly interdisciplinary research 	D
Experience in analysis, interpretation and visualisation of scientific data	E
Practical experience in any of the following tools/techniques/areas: <ul style="list-style-type: none"> • Computational tools for machine learning • Non-interactive High Performance Computing Platforms (e.g. SLURM) • medical regulatory processes • ISO 13485; ISO 27k family (e.g. 27001); ISO 14971 • NIST 800-53; 800-53/FI; 800-30 	D
Authorship of articles published in top-quality AI/ML journals and conferences, such as ICLR/ICML/NeurIPS/AAAI/ACL/EMNLP/CVPR	D
Knowledge	
Knowledge of research methods and statistical procedures relevant to the field of AI and Machine Learning	E
Knowledge of data presentation and analysis as relevant to AI and Machine Learning	E
Knowledge of different methods to develop and analyse computational models	E

Knowledge of computational or engineering techniques relevant to one of the 4 Themes	D
Skills & Abilities	
Ability to conduct a detailed review of recent literature	E
Ability to develop and apply new concepts	E
A creative approach to problem-solving	E
Excellent verbal communication skills and the ability to effectively collaborate	E
Excellent written communication skills and the ability to write for scientific publication to achieve impact	E
Ability to motivate others to produce a high standard of work	E
Ability to organise own work with minimal supervision	E
Ability to prioritise own work in response to deadlines	E
Ability to work collaboratively, as part of a large, distributed team, potentially across different time-zones	E
Other	
A flexible attitude towards work	E
Willingness to undertake any necessary training for the role	E
Discipline and regard for confidentiality and security at all times	E
Willingness to travel both within the Singapore and to the United Kingdom, and other destinations as required to conduct and disseminate research	D
Willingness to work out of normal working hours (including weekends) if the requirements of the project demand.	D

Imperial Global Singapore is committed to equality of opportunity and to eliminating discrimination. All employees are expected to:

- 1) Champion a positive approach to change and opportunity
- 2) Encourage inclusive participation and eliminate discrimination
- 3) Communicate regularly and effectively within and across teams
- 4) Consider the thoughts and expectations of others
- 5) Deliver positive outcomes
- 6) Develop and grow skills and expertise
- 7) Work in a planned and managed way

Employees are also required to comply with all IGS policies and regulations, paying special attention to:

- Confidentiality
- Conflict of Interest
- Data Protection
- Equal Opportunities
- Financial Regulations
- Health and Safety
- Information Technology
- Smoking
- Private Engagements and Register of Interests
- The regulations of CREATE Tower and of Singapore

They must also undertake specific training and assume responsibility for safety relevant to specific roles, as set out on the [College Website Health and Safety Structure and Responsibilities](#) page.

IGS observes the San-Francisco Declaration on Research Assessment (DORA), which means that in hiring and promotion decisions, we evaluate applicants on the quality of their work, not the journal impact factor where it is published.

IGS believes that the use of animals in research is vital to improve human and animal health and welfare. Animals may only be used in research programmes where their use is shown to be necessary for developing new treatments and making medical advances. IGS is committed to ensuring that, in cases where this research is deemed essential, animals in are treated with full respect, and that any and all staff involved with this work show due consideration at every level. For further details, applicants are directed to:
