## Correction

Errors in data extraction resulted in reporting of incorrect rates of brain injuries for 2010-2017.

Erroneous data extraction resulted in:

1. Incorrect inclusion of babies with Grade 1 Hypoxic Ischaemic Encephalopathy (HIE) who did not receive therapeutic hypothermia
2. Incorrect exclusion of babies with central nervous system infection after 48 hours after birth

A data transcription error resulted in:

3. Incorrect numbers of exclusions

These errors have been corrected, and rates of *brain injuries occurring during or soon after birth* for 2010-2017 have been recalculated using correct data in the tables and figures of this corrected report.

This correction has resulted in changes to the following tables and figures:

- Annual counts and rates of infants in England with *Brain injury occurring during or soon after birth (all gestational ages)*: Table 1 and Figure 1
- Annual counts and rates of infants in England with *Brain injury occurring during or soon after birth (term infants  $\geq 37$  weeks gestational age)*: Table 2 and Figure 2
- Annual counts and rates of infants in England with *Brain injury occurring during or soon after birth (preterm infants  $< 37$  weeks gestational age)*: Table 3 and Figure 3
- Annual counts and rates of infants in England with hypoxic ischaemic encephalopathy (HIE): Table 4
- Annual counts and rates of infants in England with central nervous system (CNS) infect: Table 7
- Annual counts and rates of infants (all gestational ages) in 2016 with a diagnosis of *brain injuries occurring during or soon after birth*, without exclusions, by Sustainability and Transformation Partnership (STP), attributed by Lower Super Output Area (LSOA) of the mother's residence in England at the time of delivery: Table 11
- Annual counts and rates of infants (all gestational ages) in 2017 with a diagnosis of *brain injuries occurring during or soon after birth*, without exclusions, by Sustainability and Transformation Partnership (STP), attributed by Lower Super Output Area (LSOA) of the mother's residence in England at the time of delivery: Table 12
- Annual counts and rates of Infants in England (all gestational ages) in 2016 with a diagnosis of brain injury, without exclusions, attributed by Neonatal ODN of place of birth; congruent with organisational structure of neonatal services prior to March 2018: Table 13

- Results of sensitivity analysis reassigning births and brain injuries associated with St Richard's Hospital to Thames Valley & Wessex Neonatal ODN (from South East Coast ODN), adjusted rates of brain injuries per 1,000 live births: Table 14

## 1 Context

In November 2015, the Secretary of State for Health announced a national ambition to halve the annual rates of stillbirth, neonatal death, maternal death and brain injuries occurring during or soon after birth in England.

The Department of Health recognised that there was a lack of consensus in relation to the definition of *brain injury occurring during or soon after birth*, and limited data sources for measuring such brain injuries. Therefore the Department of Health commissioned a piece of work to define *brain injury occurring during or soon after birth*, and using the National Neonatal Research Database (NNRD) established a baseline for 2010 and calculated annual rates up to 2015. These data have been previously published<sup>1 2</sup>.

The Department of Health and Social Care want to build on this previous work, specifically to track progress towards the National Maternity Ambition to halve the rate of *brain injuries occurring during or soon after birth* by 2025, with a 20% reduction by 2020<sup>3</sup>.

In this follow-up report we provide the following rates for 2016 and 2017 in England:

- (a) Annual rates of *brain injuries occurring during or soon after birth* for all gestational ages, and for term and preterm infants separately.**
- (b) Annual rates of individual conditions that contribute to *brain injuries occurring during or soon after birth*.**

In addition we provide the following annual regional rates at the level of maternity and neonatal providers:

- (c) Annual rates of *brain injuries occurring during or soon after birth* by Sustainability and Transformation Partnerships (STP) with cases attributed by *mother's postcode of residence at birth*.**
- (d) Annual rates of *brain injuries occurring during or soon after birth* by Neonatal Operational Delivery Network (ODN) with cases attributed by *place of birth*.**

## 2 Methods

### 2.1 Defining brain injuries occurring during or soon after birth

The definition for *brain injuries occurring during or soon after birth* for the national maternity ambition was agreed by an expert group as previously described<sup>4</sup>. This definition is as follows:

- **Population: all babies admitted to a neonatal unit in England**
- **Time period after birth: all brain injuries that are detected during the neonatal unit stay**
- **Conditions to be included:**
  - a. *Infants with a diagnosis consistent with **hypoxic ischaemic encephalopathy**: term and near-term infants only*
  - b. *Infants with a diagnosis of **intracranial haemorrhage, perinatal stroke, hypoxic ischaemic encephalopathy (HIE), central nervous system infection, and kernicterus (bilirubin encephalopathy)**: all infants*
  - c. ***preterm white matter disease (periventricular leukomalacia)**: preterm infants only*
  - d. *Infants with a recorded **seizure**: all infants*
- **Denominator: all live births in England** to be used as the denominator for calculating the annual rate of “brain injuries occurring during or soon after birth”
- **Exclusions:** a consensus decision<sup>4</sup> was made to present data before and after exclusion of infants with the following conditions leading to brain injury prior to birth: **congenital encephalopathies (including inborn errors of metabolism), congenital infections and congenital brain abnormalities**

Further descriptive information and the NNRD data fields used to determine *brain injuries occurring during or soon after birth* and exclusions are shown in Appendix 1.

## 2.2 Regional attribution of cases of brain injuries occurring during or soon after birth

The Department of Health and Social Care commissioned the Neonatal Data Analysis Unit to provide regional rates of *brain injuries occurring during or soon after birth* by maternity and neonatal providers. Regional rates of *brain injuries occurring during or soon after birth* are reported at the organisational level of Neonatal Operational Delivery Network (ODN) or Local Maternity System (LMS) of birth, in contrast to regional rates of neonatal deaths and stillbirths which have been reported at Trust level. This is because some neonatal conditions that comprise *brain injuries occurring during or soon after birth*, such as cystic periventricular leukomalacia, cannot be attributed accurately to an individual neonatal or maternity unit because there is a variable and unpredictable time delay between injury and clinical detection, or because the final injury may be the end result of multiple factors occurring at different time points and locations. Therefore in a networked model of care where postnatal transfers are common, it is not possible to attribute brain injuries accurately to an individual Trust nor appropriate to do so.

The regional organisation of maternity and neonatal services in England are not aligned. Maternity services are organised as Local Maternity Systems (LMS) covering populations of 500,000 to 1.5 million, within which all providers work to common agreed standards and protocols<sup>5</sup>. LMS boundaries are coterminous with Sustainability and Transformation Partnerships (STP)<sup>6</sup>, of which there were 44 in 2016 and 2017<sup>7</sup>. In early 2019 Northumberland, Tyne and Wear and North Durham STP; Durham, Darlington, Teesside, Hambleton, Richmondshire and Whitby STP; and West, North and East Cumbria STP merged to form the Cumbria and North East STP; this has led to a reduction in STP in England to 42. As directed by the Department of Health and Social Care, this report provides rates of brain injuries aligned with the most recent grouping of 42 STP.

Neonatal services are organised as regional Neonatal Operational Delivery Networks (ODN). Neonatal Operational Delivery Networks are focussed on coordinating patient pathways between providers over a wide area to ensure access to specialist resources and expertise; babies that requires neonatal care should receive all such care within their local Neonatal ODN. Neonatal ODN do not align with LMS. There are 11 Neonatal ODN<sup>8</sup>:

- East Midlands ODN (formerly Central Newborn Network & Trent Perinatal Network)

<sup>6</sup> Implementing Better Births: A resource pack for Local Maternity Systems, NHS England, 2017; <https://www.england.nhs.uk/wp-content/uploads/2017/03/nhs-guidance-maternity-services-v1.pdf>

<sup>7</sup> NHS England, last accessed 18<sup>th</sup> March 2019. <https://www.england.nhs.uk/integratedcare/stps/view-stps/>

<sup>8</sup> East Midlands ODN, last accessed 18<sup>th</sup> March 2019. <https://www.emnodn.nhs.uk/about-us/what-is-a-neonatal-network/>

- East of England ODN
- London ODN (which comprises three clinical networks: South London, North West London and North Central & East London)
- North West ODN
- Northern ODN
- South East Coast ODN
- South West ODN
- Southern West Midlands ODN
- Staffordshire, Shropshire and the Black Country ODN
- Thames Valley and Wessex ODN
- Yorkshire and Humber ODN

In March 2018, a number of NHS Trusts were reassigned to different ODN. Specifically, George Eliot Hospital NHS Trust, South Warwickshire NHS Foundation Trust, and University Hospitals Coventry and Warwickshire NHS Trust moved from the East Midlands ODN to the Southern West Midlands Neonatal; Sandwell and West Birmingham Hospitals NHS Trusts moved from the Southern West Midlands ODN to the Staffordshire, Shropshire and the Black Country ODN. Babies with brain injuries were assigned to an ODN using the assignment of neonatal units/NHS Trusts to ODN as existed prior to March 2018. This was done to ensure that numerator and denominator data aligned, since denominator data were only available for the pre March 2018 organisational structure of neonatal services (as described in section 2.4.3). Thus, this report presents rates of brain injuries by ODN using the assignment of neonatal units/NHS Trusts to ODN as existed prior to March 2018. Data are presented for the 11 Neonatal ODN and data for London are additionally presented by clinical network: North Central & East London, North West London, and South London.

Rates of *brain injuries occurring during or soon after birth* are reported with attribution at the following regional levels; these attributions align with other national data including Mothers and Babies: Reducing Risk through Audits and Confidential Enquiries across the UK (MBRRACE-UK)<sup>9</sup>:

1. By STP/LMS with attribution of cases based on the postcode of the **mother's residence at the time of delivery**
2. By Neonatal ODN with attribution of cases based on **place of birth**

## 2.3 Numerator data source: National Neonatal Research Database

The Department of Health and Social Care commissioned the National Neonatal Research Database (NNRD) as the numerator source for the calculation of rates of *brain injuries occurring during or soon after birth* for the national maternity ambition.

The NNRD is formed from summary electronic patient data entered on all admissions to National Health Service (NHS) neonatal units in England; these data are held as a national resource. Data in the NNRD have undergone processing to identify duplicates, out of range values, internal inconsistencies, and other potentially erroneous entries. In addition to these internal processes, feedback quality assurance checks are undertaken with clinicians for key items as part of the National Neonatal Audit Programme. Data in the NNRD are merged across multiple patient episodes, if necessary for the purposes of an analysis.

All neonatal units (currently 100% of NHS neonatal units in England), that contribute data to the NNRD form the UK Neonatal Collaborative, UKNC. Approximately 400 predefined data items, the Neonatal Data Set<sup>10</sup>, are extracted quarterly from these electronic patient records to form the NNRD. The Neonatal Data Set is an approved NHS Information Standard (ISB1595).

### 2.3.1 National counts of brain injuries

National counts of *brain injuries occurring during or soon after birth* are calculated using a cohort of infants who receive at least one episode of care in a NHS neonatal unit in England. As part of the NNRD data cleaning process, babies with missing gestational age or missing birth year are excluded from the analysis data set. To extract counts for term and preterm babies, gestational ages of  $\geq 37$  weeks and  $< 37$  weeks respectively were applied.

### 2.3.2 Regional counts of brain injuries by Sustainability and Transformation Partnerships and Local Maternity Systems

The NNRD holds data on mother's Lower Super Output Area (LSOA) at time of birth, which were used to assign cases to the STP/LMS associated with each LSOA. LSOAs were mapped to STP/LMS using data provided by the Department of Health and Social Care (Appendix 3) using the ONS Geoportal<sup>11</sup>. A number of babies with a definition of *brain injuries occurring during or soon after birth* had missing information for mother's

<sup>11</sup> ONS Geoportal. Last accessed 22<sup>nd</sup> January 2019. <https://geoportal.statistics.gov.uk/datasets/lsqa-2011-to-clinical-commissioning-groups-to-sustainability-and-transformation-partnerships-april-2018-lookup-in-england-version-3>

LSOA at time of birth in the NNRD and these babies could not be mapped to a STP/LMS (Table 11).

### 2.3.3 Regional counts of brain injuries by Neonatal Operational Delivery Networks

The NNRD holds data on neonatal unit of first admission which were used to attribute cases to the appropriate Neonatal ODN using data provided by the Department of Health and Social Care (Appendix 2). This mapping tool combines data from the Royal College of Obstetricians and Gynaecologists (RCOG) organisational survey<sup>12</sup> (which maps neonatal units/sites to NHS Trust) and data from MBRRACE-UK<sup>13</sup> (which maps NHS Trust to ODN) and is congruent with the organisational structure of neonatal ODN prior to March 2018 (see section 2.2 for further detail). Babies born in transit, at home or with missing information for place of birth were assigned to the NHS Trust and appropriate Neonatal ODN by their first provider of neonatal care (neonatal unit of first admission).

For inclusion in the national counts of brain injuries, babies were required to have at least one episode of care in an English NHS neonatal unit. For inclusion in the regional counts by Neonatal ODN babies were required to be born in an English NHS unit. As a result, babies born in Scotland or Wales who had at least one episode of care in an English neonatal unit were excluded from the regional counts of brain injuries by Neonatal ODN, but have been included in the national analysis. In addition, babies born at The Portland Hospital for Women and Children and RAF Lakenheath (48th Medical Group) are excluded from the Neonatal ODN level analysis as these hospitals are not part of a Neonatal ODN, however they are included in the analysis at the national level. The sum of brain injuries across the Neonatal ODN is therefore lower than the total counts of brain injuries from the national analysis (Table 13).

St Richard's Hospital and Worthing Hospital are both within the same NHS Trust (Western Sussex Hospitals NHS Foundation Trust) but are within different Neonatal ODN: St Richard's Hospital is within the Thames Valley & Wessex ODN and Worthing Hospital is within the South East Coast ODN. In order to align attribution of cases with denominator data, cases at St Richards Hospital were assigned to the South East Coast Neonatal ODN (rather than the Thames Valley & Wessex Neonatal ODN); this

assignment is consistent with the MBRRACE-UK report (see section 2.4.3 for more detail).

## 2.4 Denominator data sources

### 2.4.1 National live births

To calculate national rates for 2016 and 2017, denominator data from the Office for National Statistics (ONS) Birth Summary Tables for England and Wales<sup>14</sup> where mothers' usual residence is England were used.

To calculate national rates for preterm and term births, ONS data describing total live births by gestational age (in weeks) for 2016 and 2017, where mothers' usual residence is England<sup>15</sup> were used. These data were also used as the denominator when calculating rates of medical conditions leading to *brain injuries occurring during or soon after birth* where gestational age is specified. Births were extracted from a dataset containing birth registrations linked to their corresponding notification and infants missing gestational age and where birth weight was inconsistent with gestational age were excluded. As a result, lower numbers of live births are reported for these analyses than for analyses that use the ONS Birth Summary Tables<sup>11</sup>.

### 2.4.2 Regional live births by Sustainability and Transformation Partnerships and Local Maternity Systems

Total numbers of live births per LSOA for years 2016 and 2017 were obtained from the ONS NOMIS system<sup>16</sup>. These births were then mapped to their respective STP using the mapping data provided by the Department of Health and Social Care (Appendix 3).

### 2.4.3 Regional live births by Neonatal ODN

Neonatal ODN of birth could not be derived from ONS data for all births (e.g. home births or births in transit). Mothers and Babies: Reducing Risk through Audits and Confidential Enquiries across the UK (MBRRACE-UK) is commissioned by the Healthcare Quality Improvement Partnership (HQIP) to undertake the Maternal, Newborn and Infant Clinical Outcome Review Programme on behalf of NHS England, the Welsh Government, the Scottish Government Health and Social Care Directorate, the Northern Ireland Department of Health, the States of Guernsey, the States of

---

<sup>14</sup> Office for National Statistics, last accessed 17<sup>th</sup> January 2019, <https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/livebirths/datasets/birthsummarytables>

<sup>15</sup> Office for National Statistics, last accessed 20<sup>th</sup> January 2019; <https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/livebirths/adhocs/009545livebirthsbygestationalagewheremothersusualresidencewasengland2016and2017>

<sup>16</sup> Office for National Statistics, Official Labour Market Statistics. Accessed via: <https://www.nomisweb.co.uk/>

Jersey, and the Isle of Man Government. The MBRRACE-UK Perinatal Mortality Surveillance Reports provide birth data in England where births, including home births and births in transit, can be attributed to their respective Neonatal ODN. The 2016 report<sup>17</sup> provides both the total number of births and crude stillbirth rate in 2016 by Neonatal Network in England, permitting the calculation of total live births per Neonatal ODN. Total live births per Neonatal ODN are reported using the organisational structure of neonatal services applicable prior to March 2018 (see mapping tool in Appendix 2) and are used as the denominator for calculation of the rates of *brain injuries occurring during or soon after birth* by Neonatal ODN. Corresponding denominator data are not yet available for 2017. The fifth MBRRACE-UK Perinatal Mortality Surveillance Report will report total live births in 2017 by neonatal network and is expected later in 2019.

Figures for total live births per Neonatal ODN were calculated from the MBRRACE-UK data and do not include births from The Portland Hospital for Women and Children (HCA Healthcare UK) or RAF Lakenheath (48<sup>th</sup> Medical Group) as neither of these sites are part of a Neonatal ODN. Home births were allocated to the Trust responsible and then included in the appropriate Neonatal ODN for that Trust. Total live births in England from MBRRACE-UK do not align perfectly with estimates from ONS data.

Western Sussex Hospitals NHS Foundation Trust has two neonatal units on two different hospital sites (St Richards Hospital and Worthing Hospital) and these are within different Neonatal ODN; St Richards Hospital forms part of the Thames Valley & Wessex Neonatal ODN and Worthing Hospital forms part of the South East Coast Neonatal ODN. MBRRACE-UK assigns births at St. Richards Hospital to the South East Coast Neonatal ODN (rather than the Thames Valley & Wessex Neonatal ODN). To maintain consistency we present data describing rates of *brain injuries occurring during or soon after birth* by Neonatal ODN to align with the mapping of Trust to Neonatal ODN used by MBRRACE-UK (i.e. St Richard's Hospital is mapped to South East Coast Neonatal ODN).

From MBRRACE-UK it was possible to obtain estimates of total births from St Richard's Hospital for 2016. Using these data we undertook a sensitivity analysis in which we reassigned cases of brain injuries and denominator live births for St Richard's Hospital to Thames Valley & Wessex ODN and explored the impact of this reassignment on rates of *brain injuries occurring during or soon after birth* per 1,000 live births for both South East Coast ODN and Thames Valley & Wessex ODN.

## 2.5 Statistical methods

We present rates of brain injuries per 1,000 live births unless otherwise stated. For years 2012-2015, rates of brain injuries were calculated as described previously<sup>18</sup>.

Confidence intervals (CI) for rates have been calculated using the following method:

- 1) Calculate error factor (EF):

$$EF = e^{(1.96/\sqrt{D})}$$

where  $D$  = number of brain injuries

- 2) Calculate lower and upper CI:

$$\text{Lower CI} = \text{Rate} \div EF$$

$$\text{Upper CI} = \text{Rate} \times EF$$

### 3.1.2 Rates of brain injuries in England: term infants

<b>Numerator:</b>	Annual number of term infants ( $\geq 37$ weeks gestational age) who received at least one episode of care within a neonatal unit in England with a <i>brain injury occurring during or soon after birth</i> in England, with and without exclusions, obtained from the NNRD.
<b>Denominator:</b>	Annual number of term live births in England obtained from ONS Live Births by Gestational Age <sup>20</sup> .

Table 2 presents the incidence and crude rates per 1,000 live term births of brain injuries in term infants, with and without exclusions of infants with conditions leading to brain injury prior to birth, for years 2012 to 2017. Figure 2 displays the crude rates of brain injuries in term infants per 1,000 live term births, prior to exclusions.

<sup>20</sup> Office for National Statistics, last accessed 20<sup>th</sup> January 2019;

### 3.1.4 Rates of brain injuries in England by medical condition

<b>Numerators:</b>	<p>Number of infants who received at least one instance of care within a neonatal unit in England with individual conditions included in the definition of <i>brain injuries occurring during or soon after birth</i> obtained from the NNRD:</p> <ol style="list-style-type: none"> <li>1. All gestational ages</li> <li>2. Term births only (<math>\geq 37</math> gestational weeks)</li> <li>3. Preterm births only (<math>&lt; 37</math> gestational weeks)</li> </ol>
<b>Denominators:</b>	<ol style="list-style-type: none"> <li>1. Annual number of live births in England obtained from ONS Birth Summary Tables<sup>22</sup>.</li> <li>2. Annual number of term live births in England obtained from ONS Live Births by Gestational Age<sup>23</sup>.</li> <li>3. Number of preterm live births in England obtained from ONS Live Births by Gestational Age<sup>18</sup>.</li> </ol>

Tables 4 - 10 present the national rates of different medical conditions leading to brain injury at or soon after birth. Further explanation of way different medical conditions are defined, including the relevant NNRD data items, can be found in Appendix 1. It was possible for infants to be diagnosed with more than one condition leading to brain injury at or soon after birth, so the sum of total number of cases in tables 4 to 9 will not match totals in tables 1 to 3.

It is important to note that the the definition of hypoxic ischaemic encephalopathy (HIE) included within the definition of *brain injuries occurring during or soon after birth* is different from the definition used in other national reports (e.g. the National Neonatal Audit Programme audit measure *encephalopathy*<sup>24</sup> and Each Baby Counts outcome *Severe brain injury*<sup>25</sup>).

Low numbers of annual cases of *bilirubin encephalopathy* were reported. To ensure confidentiality and prevent disclosure of protected information cases of *bilirubin encephalopathy* are presented in aggregate over the six year period between 2012 and 2017.

### 3.2 Regional rates of brain injuries by Sustainability and Transformation Partnerships and Local Maternity System

<b>Numerator:</b>	Annual number of infants with <i>brain injuries occurring during or soon after birth</i> , without exclusions, attributed by LSOA of mother’s residence in England at time of birth. Obtained from the NNRD and mapped to STP/LMS using data in Appendix 3.
<b>Denominator:</b>	Annual number of live births in England obtained from ONS NOMIS <sup>26</sup> and mapped to STP/LMS using data in Appendix 3.

Tables 11 and 12 present the rates of *brain injuries occurring during or soon after birth* per 1,000 live births across the 42 STP/LMS associated with mother’s residence at time of birth in England in 2016 and 2017 respectively.

<sup>26</sup> Office for National Statistics, Official Labour Market Statistics. Accessed via: <https://www.nomisweb.co.uk/>

**Table 11:** Infants (all gestational ages) in 2016 with a diagnosis of *brain injuries occurring during or soon after birth*, without exclusions, by Sustainability and Transformation Partnership (STP), attributed by Lower Super Output Area (LSOA) of the mother's residence in England at the time of delivery

Sustainability & Transformation Partnership (STP)	2016

### 3.3 Regional rates of brain injuries by Neonatal Operational Delivery Network

<b>Numerator:</b>	Annual number of infants with <i>brain injuries occurring during or soon after birth</i> in England, without exclusions, attributed by Neonatal ODN of birth. Obtained from the NNRD and mapped to Neonatal ODN using data in Appendix 2.
<b>Denominator:</b>	Annual number of live births in England by Neonatal ODN calculated using total birth and crude stillbirth rate obtained from MBRRACE-UK <sup>27</sup> .

Table 13 presents the rates of *brain injuries occurring during or soon after birth* per 1,000 live births in 2016 across Neonatal ODN, where place of birth was in England.

Table 14 presents the adjusted rates of *brain injuries occurring during or soon after birth* per 1,000 live births in 2016 for South East Coast Neonatal ODN and Thames Valley & Wessex Neonatal ODN when reassigning the estimates for brain injuries and live births at St Richard's Hospital to the Thames Valley & Wessex Neonatal ODN. To note, the crude stillbirth rate for St Richard's Hospital was not available from the MBRRACE-UK data so the stillbirth rate for Western Sussex Hospitals NHS Foundation Trust was used as a proxy. Also, the adjusted rates for both South East Coast Neonatal ODN and Thames Valley & Wessex Neonatal ODN exclude any home births that would have been attributed to St Richard's Hospital.

<sup>27</sup> Draper ES, Gallimore ID, Kurinczuk JJ, Smith PW, Boby T, Smith LK, Manktelow BN, on behalf of the MBRRACE-UK Collaboration. Trent Perinatal & Central Neonatal	58,655	4.01	58,420	257	4.40	(3.89, 4.97)
Yorkshire & Humber	67,838	4.66	67,522	281	4.16	(3.70, 4.68)
<b>TOTAL</b>	<b>662,412</b>	<b>4.30</b>	<b>659,802</b>	<b>3,060</b>	<b>4.64</b>	<b>(4.48, 4.81)</b>

Abbreviations: ODN: operational delivery network; CI: confidence interval

\*South East Coast ODN estimates also include total births, live births and numbers of infants with brain injuries associated with St Richard's Hospital which should instead be assigned to Thames Valley & Wessex. †17 infants with brain injuries were excluded from the ODN analysis as they were not born in English NHS units.

**Table 14:** Results of sensitivity analysis reassigning births and brain injuries associated with St Richard’s Hospital to Thames Valley & Wessex Neonatal ODN (from South East Coast ODN), adjusted rates of brain injuries per 1,000 live births.

Year	Total Births: St Richard’s Hospital	Crude Stillbirth Rate per 1,000 births: Western Sussex NHS Trust	Estimated Live Births: St Richard’s Hospital	Total Number of Brain Injuries: St Richard’s Hospital	Adjusted Rate (95% CI) of brain injuries per 1,000 births: South East Coast Neonatal ODN	Adjusted Rate (95% CI) of brain injuries per 1,000 live births: Thames Valley & Wessex Neonatal ODN
2016	2,629	4.15	2,618	9	5.05 (4.44, 5.74)	3.80 (3.35, 4.31)

Appendix 1: Definition of brain injuries occurring during or soon after birth using the National Neonatal Research Database (NNRD)

## Appendix 1

### Brain injury definition: National Neonatal Research Database (NNRD) data fields

#### Scope

- All babies admitted to a NHS neonatal unit in England
- Injury detected during neonatal unit stay to discharge
- Annual data, from January 1<sup>st</sup> 2016 to December 31<sup>st</sup> 2017 (inclusive)

#### Data source

- Data extracted from the National Neonatal Research Database (NNRD) at the Neonatal Data Analysis Unit at Imperial College London.
- The NNRD contains a predefined set of variables (the Neonatal Data Set, an authorised NHS Information Standard) extracted at regular intervals from the Electronic Patient Record of every admission to a NHS neonatal unit in England, Wales, and Scotland, cleaned and merged across multiple patient episodes, to create a single data file for each patient.

## Exclusions

Data will be presented before and after exclusion of infants with **seizures** (condition defined as above) AND the following diagnosis codes recorded in the *Diagnosis* field during their their neonatal unit admission.

### Condition

Congenital encephalopathies

### Data items

**Episodic variables:** Any of the following diagnosis codes entered into any *Diagnosis* field:

1. Congenital neuropathy (unknown or unspecified cause)
2. Congenital myopathy
3. Mitochondrial myopathy
4. Congenital Central Hypoventilation Syndrome (CCHS)
5. Congenital hypertonia
6. Congenital hypotonia - floppy
7. Benign familial neonatal seizures
8. Inborn error of metabolism (description required)
9. Myotonic dystrophy requiring endotracheal intubation and assisted ventilation
10. Disorder of branch chain amino acid metabolism
11. Disorders of fatty acid metabolism
12. Disorders of fatty acid metabolism: carnitine metabolism
13. Disorder of glycine metabolism
14. Disorder of glycine metabolism: Non ketotic hyperglycinaemia
15. Hyperammonaemia of the newborn
16. Disorders of lysine and hydroxylysine metabolism
17. Disorders of ornithine metabolism
18. Disorders of pyruvate metabolism and gluconeogenesis
19. Disorder of carbohydrate metabolism (unknown or unspecified cause)
20. Down Syndrome (Trisomy 21)
21. Trisomy 21
22. Edwards Syndrome (Trisomy 18)
23. Trisomy 18
24. Patau Syndrome (Trisomy 13)
25. Trisomy 13

Congenital infections

**Episodic variables:** Any of the following diagnosis codes entered into any *Diagnosis* field:

1. Congenital viral disease (specify)
2. Syphilis - latent congenital
3. Congenital rubella syndrome

Appendix 1: Definition of brain injuries occurring during or soon after birth using the National Neonatal Research Database (NNRD)

Congenital brain  
abnormalities

4. Congenital cytomegalovirus infection
5. Congenital herpes [herpes simplex] infection
6. Other congenital viral diseases
7. Congenital viral disease (unknown or unspecified cause)
8. Congenital toxoplasmosis

**Episodic variables:** Any of the following diagnosis codes entered into any *Diagnosis* field:

1. Malformations of aqueduct of Sylvius
2. Atresia of foramina of Magendie and Luschka
3. Atresia of foramina of Magendie and Luschka
4. Other congenital hydrocephalus
5. X linked congenital hydrocephalus
6. Congenital hydrocephalus (unknown or unspecified cause)
7. Congenital hydrocephalus
8. Lissencephaly
9. Vermal agenesis
10. Septum pelucidum absence – congenital
11. Congenital malformations of corpus callosum
12. Arhinencephaly
13. Holoprosencephaly
14. Other reduction deformities of brain
15. Septo-optic dysplasia
16. Other specified congenital malformations of brain
17. Congenital malformation of brain (unknown or unspecified cause)
18. Other congenital malformations of brain
19. Cervical spina bifida with hydrocephalus
20. Thoracic spina bifida with hydrocephalus
21. Spina bifida (unknown or unspecified cause)
22. Spina bifida
23. Amyelia
24. Hypoplasia and dysplasia of spinal cord
25. Other specified congenital malformations of spinal cord
26. Congenital malformation of spinal cord (unknown or unspecified cause)
27. Nerve palsies – congenital
28. Arnold-Chiari syndrome
29. Other specified congenital malformations of nervous system
30. Congenital malformation of nervous system (unknown or unspecified cause)
31. Other congenital malformations of nervous system
32. Congenital Hydrocephalus

**Appendix 2: Mapping hospital of birth to Neonatal ODN.** Mapping provided by Department of Health and Social Care using a combination of data from the Royal College of Obstetricians and Gynaecologists (RCOG) organisational survey<sup>28</sup> and data from MBRRACE-UK<sup>29</sup>.
